String Split and Join

👤 **by shashank21j**

| Problem | Submissions | Leaderboard | Discussions | Editorial |

f 𝕐 in

In Python, a string can be split on a delimiter.

Example:

```
>>> a = "this is a string"
>>> a = a.split(" ") # a is converted to a list of strings.
>>> print a
['this', 'is', 'a', 'string']
```

Joining a string is simple:

```
>>> a = "-".join(a)
>>> print a
this-is-a-string
```

More

Task
You are given a string. Split the string on a `" "` (space) delimiter and join using a `–` hyphen.

Input Format
The first line contains a string consisting of space separated words.

Output Format
Print the formatted string as explained above.

Sample Input

```
this is a string
```

Sample Output

```
this-is-a-string
```

Current Buffer (saved locally, editable)   ⑂ 🕘   Python 2   ⌄   ⤢ ⚙

```
1  # Enter your code here. Read input from STDIN. Print output to STDOUT
2  str = raw_input()
3  str = str.split()
4  str = "-".join(str)
5  print(str)
```
